Dear ISWI Participant:

Two issues ago, on 9 June 2010, this newsletter mentioned the SWEF (Space Weather Enterprise Forum) that took place recently in Washington, District of Columbia. NASA HQ is also in this city.

NASA's comment on the forum can be seen here:
<http://science.nasa.gov/science-news/science-at-nasa/2010/04jun_swef/>

In case you cannot access that site, I attach just the upper part of the web page as pdf.

As we make our way towards the next solar maximum, we can expect more and more public interest in the region between the Sun and the Earth's orbit. The Sun is generally our good and stable friend, but it can do some nasty things without much warning.

Kind regards,
George Maeda
The Editor.

This pdf circulated in ISWI Newsletter Volume 2, Number 46 (12 June 2010).

This pdf page is the upper portion of this web page:

http://science.nasa.gov/science-news/science-at-nasa/2010/04jun_swef/

Credit for this web page goes to Science@NASA. This pdf is circulated only for the purpose of encouraging ISWI participants to view the entire web page. And note that the web page will not exist forever.

June 4, 2010: Earth and space are about to come into contact in a way that's new to human history. To make preparations, authorities in Washington DC are holding a meeting: The Space Weather Enterprise Forum at the National Press Club on June 8th.

Richard Fisher, head of NASA's Heliophysics Division, explains what it's all about:

"The sun is waking up from a deep slumber, and in the next few years we expect to see much higher levels of solar activity. At the same time, our technological society
