ISWI current projects are 17 (May 16, 2013)

Good morning.

Welcome to: **International Space Weather Initiative (ISWI)**

**ISWI is a program of international cooperation** to advance the space weather science by a combination of instrument deployment, analysis and interpretation of space weather data from the deployed instruments in conjunction with space data, and communicate the results to the public and students.

ISWI is a follow-up activity to the successful IHY 2007, but focusing exclusively on space weather.

**The goal of the ISWI** is to develop the scientific insight necessary to understand the science, and to reconstruct and forecast near-Earth space weather. This includes instrumentation, data analysis, modeling, education, training, and public outreach.

**About ISWI Newsletter:**  
 It is scheduled to be published throughout the ISWI period, 2010 through 2012, by SERC (Space Environment Research Center) of Kyushu University, Japan. The publisher is Professor K. Yumoto (also Director of SERC) and the editor is George Maeda, who is a member of his SERC staff. This newsletter was requested by Prof. Hans Haubold (United Nations Program on Space Applications) (click [here](#) UN PSA archive). His letter is a beautifully concise statement about the mission of ISWI - where it came from and where it is to go.
