CALLISTO status report/newsletter #90

Solar activity increasing

On May 22, 2021 there was a nice type II burst, recorded by several stations of the e-Callisto network. Burst was composed out of fundamental and 1st harmonic radiation, including split band. Some stations can provide dynamic spectrum up to 400 MHz. Here all observations are presented in alphabetical order.

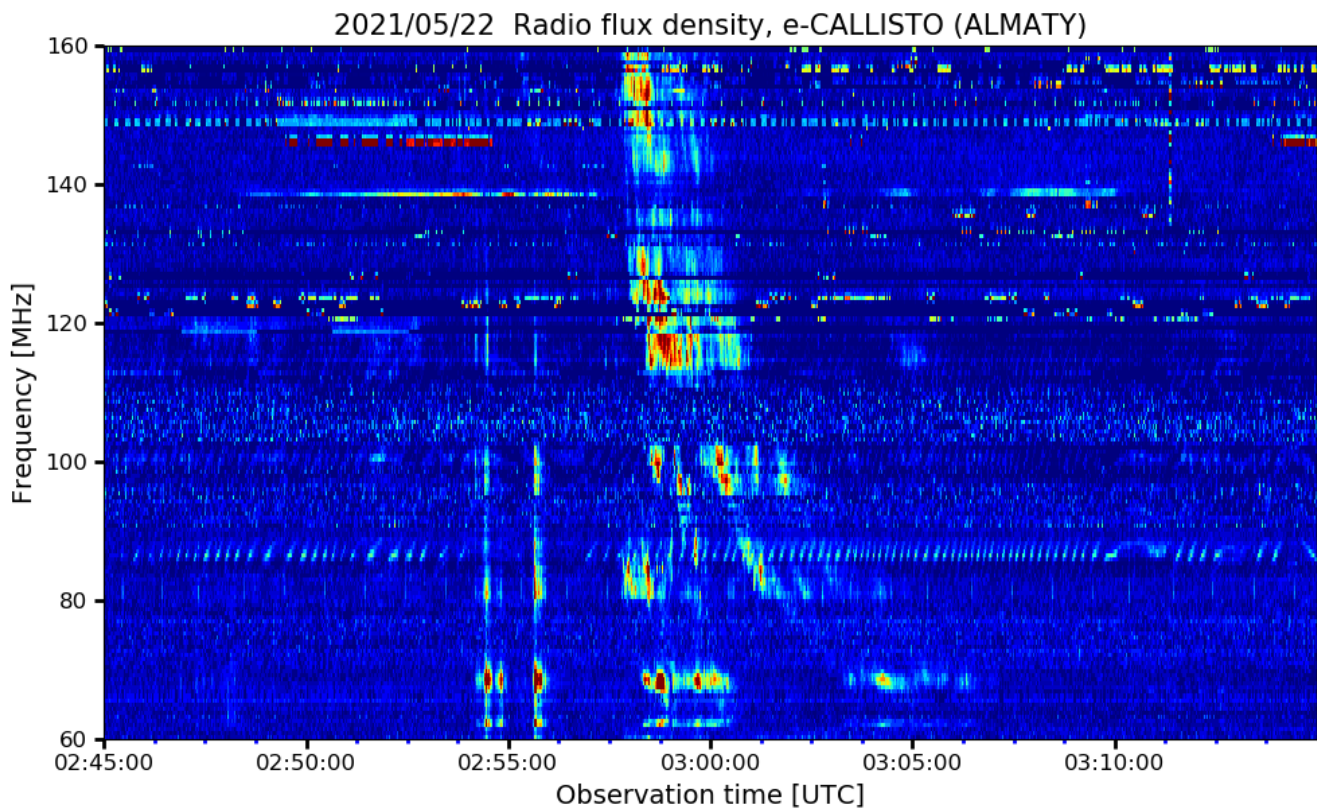

Fig. 1: Low frequency part, observed with CALLISTO in ALMATY, Kazakhstan.

More information about location: https://en.wikipedia.org/wiki/Tien_Shan_Astronomical_Observatory

Fig. 2: High frequency part, observed with CALLISTO in ALMATY, Kazakhstan. While low frequency range shown in figure 1 is suffering from strong radio interference, the high frequency part is quite clean. We can also see the triggering type III burst around 02:54 UT.

2021/05/22 Radio flux density, e-CALLISTO (KASI)

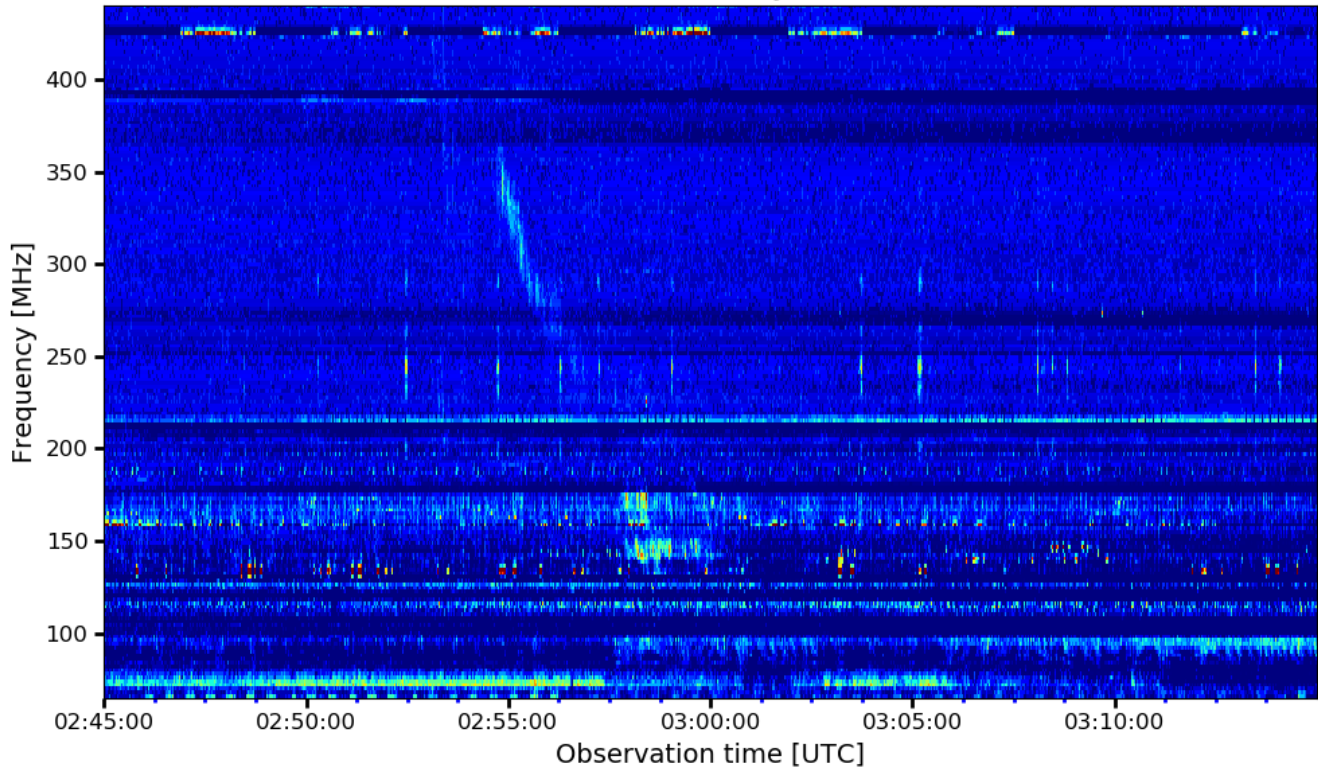

Fig. 9: Same burst, observed with LPDA and CALLISTO at KASI in Daejeon, South Korea. Antenna is tracking the Sun. Due to strong local rfi there is no low noise amplifier (LNA) installed. Nevertheless we can detect the burst in the dynamic spectrum.

News about station in Spain

Our LPDA antenna was placed on a dual (azimuth-elevation) rotator system (Yaesu G-5500) on Wed March 25th. Pictures in: https://celestina.web.uah.es/wordpress/?page_id=110 shows the antenna in its parking position (North) and in a fixed position ($Az=180^\circ$, $El=80^\circ$). The instrument was left in this fixed position until Apr 7th.

On Wed Apr 7th, automatic tracking was implemented, driven by an ARSVCOM control system via an EA4TX ARS-USB interface and the *SonneUndMond* (SuM) Sun tracking software provided with SatPC32.

AOB

- We got a new web-site with CALLISTO-related products here: <http://www.e-callisto.org/Products/Products.html>
- IRSOL is meant as the new core-station of the e-Callisto network
- Another access to Callisto data here: <https://vwo.nasa.gov/>
See also separate pdf
- CALLISTO or Callisto denotes to the spectrometer itself while e-Callisto denotes to the worldwide network.
- General information and data access here: <http://e-callisto.org/>
- e-Callisto data are hosted at University of Applied Sciences, Institute for Data Science FHNW in Brugg/Windisch, Switzerland. Additionally, data are available at ESA site here: SSA Space Weather Portal (<http://swe.ssa.esa.int/>).
- In case you (as the responsible person for operating and maintenance of Callisto) are leaving the institute or, if you are retiring, please send me name and email address of the successor.

Please do NOT respond to the email-address of the list-server with which this document was distributed, it is a computer/robot.

**Respond instead directly to me either at: [cmonstein\(at\)swissonline.ch](mailto:cmonstein@swissonline.ch)
or to: [christian.monstein\(at\)irsol.usi.ch](mailto:christian.monstein@irsol.usi.ch)**

If you do not want to receive this newsletter, please send me an email and I will take your address out of the database. On the other hand, if you think someone else might be interested in this kind of info, please let me know his/her email-address to be added to the database.
